EDUCATION

University of Wisconsin

B.S. in Computer Science, GPA: 3.66/4.00

Superior, WI

Sep 2022

WORK EXPERIENCE

Software Developer

UWS Tech Services

Superior, WI

Jan 2024–May 2024

- Collaborated with a team to develop a full-stack employee scheduling system that enables employees and supervisors to create, view and edit their work schedule.
- Utilized ASP.NET with C#, HTML, CSS, Javascript and Bootstrap to build the user interface and SQL Server to store user information and schedules.
- Reduced scheduling time by 70% through automation, improving administrative efficiency. Eliminated scheduling conflicts by implementing a system that prevents double bookings.

Software Developer Intern

ConnectMNG

Seattle, WA

Nov 2024–Present

- Worked as part of the development team to build and maintain full-stack application. Designed and developed an automation system for online donations and blog publishing.
- Integrated React.js to develop the front end and Node.js for the backend to automate the blog publishing process. Utilized PayPal SDK to allow users to submit secure payments online.
- Reduced blog publishing time by 90% and enabled the company to raise funds for future initiatives through the online donation system.

PROJECTS

Wireless Personal Pulse Oximeter

Embedded Software Development Project with Dr. Sergei Bezroukov

Superior, WI

May 2024–Oct 2024

- Designed and programmed a heart rate and oxygen level monitoring device in C using Silicon Labs Simplicity Studio IDE with Bluetooth interface for wireless data transmission.
- Integrated the MAX30102 sensor with the BGM220P microcontroller module to ensure accurate physiological data collection, sampling 50 times per second from the user's blood vessels.
- Applied a Finite Impulse Response (FIR) filter for precise heart rate and oxygen saturation calculations, enhancing measurement reliability.

Car Dealership Fleet Tracker

Freelance Project for MNG Auto Club

Los Angeles, CA

Dec 2024–Jan 2025

- Designed and developed a full-stack application for MNG Auto Club dealership to help manage and market their fleet. Designed and implemented automation system for listing new vehicles.
- Utilized HTML, JavaScript, and Tailwind CSS to build the website, and implemented Flask with REST API services to create, edit and delete vehicle postings.
- Improved customer experience by enabling users to easily browse and find desired vehicles. Reduced new car listing time by 70% by automating the process.
